

Update on VoIP and VAG Activities

There has been a spotlight for a number of years on the convergence of voice, video and data onto a single network platform and in particular a significant amount of development has been undertaken in the area of carrying voice on IP networks.

UKERNA have recently published a strategy for the support of voice services over JANET. This strategy has been underpinned with a comprehensive requirements analysis and a programme of technology investigation and trialling. This presentation will outline the results of UKERNA's work in these areas.
